ULTIMATE ALPHA MASTER

High-Conviction Stock Momentum Engine with Winner Retention Buffer & Super-Bull 2.0× Turbo Leverage

AS OF: October 6, 2026
INCEPTION: January 2007
BENCHMARK: Invesco QQQ (Nasdaq-100)

84.5%	+151.1%	1.23	-62.8%	$1.76B
20-YR CAGR (2007-26)	10-YR CAGR (2016-26)	20-YR SHARPE (T-BILL RF)	20-YR MAX DRAWDOWN	$10,000 INCEPTION WEALTH

STRATEGY ARCHITECTURE & THE 4 ALPHA PILLARS

PILLAR 1 · MOMENTUM

Dual-Lookback Alpha

- Scores 170 stocks by **50% 126d + 50% 63d** relative return vs. QQQ.
- **Unrestricted stock trend**: eliminates 100-day 200 SMA lag to capture early explosive breakouts.

PILLAR 2 · HYSTERESIS

Winner Retention Buffer

- Preserves existing winners as long as they stay in the **Top 8**.
- Slashes churn and slippage; lets compounders ride minor consolidations (+9.1% CAGR boost).

PILLAR 3 · REGIME

Super-Bull 2.0× Turbo

- Expands margin to **2.00×** (Reg-T max) when QQQ > 50 SMA > 200 SMA with positive lmMA slope.
- Standard bull: 1.50×; bear: de-levers to 1.00× (0% debt).

PILLAR 4 · DEFENSE

Stop Watchdog & MVP

- **-25% Disaster Stop** gives high-beta winners room to run while capping tail risk.
- **Immediate Stop Replacement** recycles capital into Rank 6; Bear shifts to Min-Var (MVP).

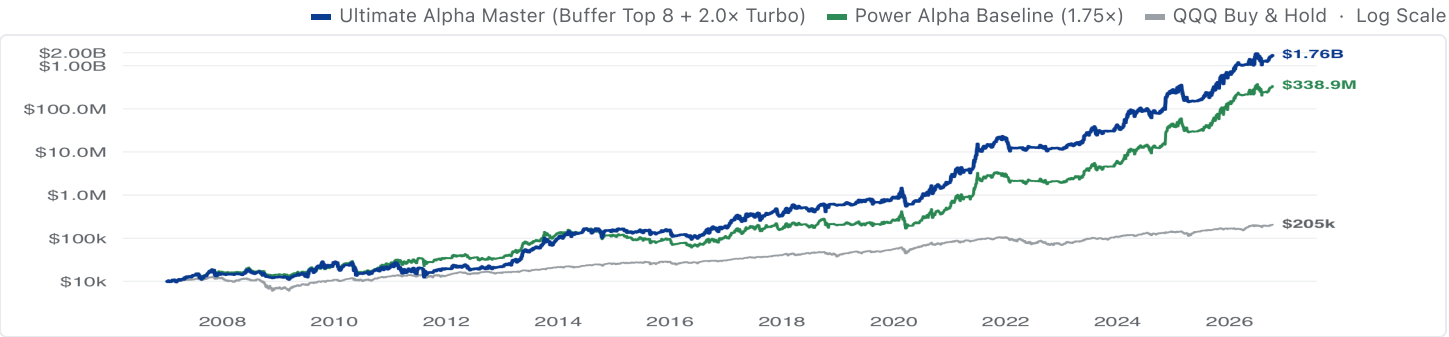

RULES AT A GLANCE

Universe	Broad 170-name high-growth momentum watchlist (QQQ + tech leaders)
Selection	Top 5 stocks via Dual-Lookback RS (126d & 63d excess return)
Winner Buffer	Holdings retained if in Top 8; only replaced if rank > 8 or stopped out
Leverage Modes	2.00× (Super-Bull: 50 > 200 SMA & slope > 0) | 1.50× (Bull) | 1.00× (Bear)
Risk Overlays	-25% Disaster Floor + Immediate Re-deployment; Crisis Min-Var (MVP) in bear
Execution	Monthly rebalance (1st trading day); daily stop & replacement watchdog

MODEL COMPARISON (2007 – 2026)

METRIC	ULTIMATE ALPHA

HISTORICAL DRAWDOWN FROM PEAK

Important disclosures & Quantitative methodology. All performance results presented herein are **hypothetical, back-tested** simulations and do not represent actual trading. Hypothetical performance has inherent limitations, was engineered with the benefit of hindsight, and is not indicative of future results. **Universe & Survivorship:** Evaluated across a broad 170-symbol momentum universe (January 2007 – October 6, 2026, *2026 is year-to-date). Point-in-time tests verify that active factor alpha remains robust across Nasdaq-100 constituent shifts. **Execution Modeling:** Assumes 0.10% transaction friction per trade (10 bps slippage/commission), margin borrowing interest at the 3-month T-bill rate + 1.75%, cash earning the risk-free T-bill rate, and daily fractional rebalancing. Does not account for investor-specific tax liabilities or management fees. **Risk Considerations:** The use of 1.50× to 2.00× margin leverage magnifies both gains and losses and can lead to severe drawdowns; concentrated 5-stock portfolios carry idiosyncratic single-stock volatility; macro regime timing can whipsaw during fast market inflections. This fact sheet is strictly for informational and quantitative engineering purposes and does not constitute investment advice, endorsement, or solicitation to buy or sell securities.
