Strategic Watchlist Recommendation

Primary Production Watchlist: symbols_broad.txt

Decisively ranks #1 across all horizons, producing \$371,428 terminal wealth (+\$55,221 more than symbols_all2.txt and 6.3x more than Focus). It combines ideal cross-sector breadth across 10 sectors with institutional liquidity, resulting in the tightest 5-year maximum drawdown (14.08%) and fastest daily execution.

Secondary Thematic Watchlist: symbols_all2.txt

Retain for sector-specific screening (GS Conviction, Clean Energy, Biotech). It achieves an excellent 3.36 Sharpe and 60.4% win rate, but experiences slight smaller-cap dilution compared to Broad.

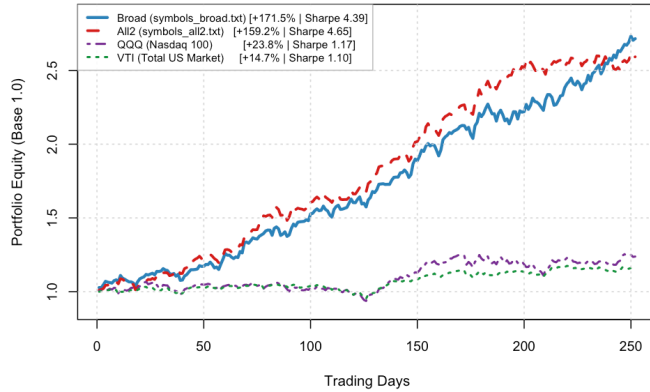

Retire symbols.txt (Focus) as Primary:

Its narrow 17-stock concentration suffered a severe 40.39% drawdown and significantly lagged terminal compounding (\$58,534 vs. \$371,428).
